The screenshot shows the homepage of VIURRSPACE. At the top, there are logos for Vancouver Island University and Royal Roads University. A search bar contains the placeholder "Search the repository ...". Below the search bar is a large banner image of a forested mountain landscape. The title "VIURRSPACE" is prominently displayed in large, bold, white letters across the banner. At the bottom left, there is a section titled "VIURRSPACE" with a brief description: "The Libraries of Royal Roads University and Vancouver Island University collaboratively offer VIURRSPACE to digitally preserve and showcase selected scholarly and creative works of the universities, together with special collections that represent the unique character of the region."

The screenshot shows the DataCite Fabrica interface. The header includes links for "About", "Support", and "Sign in". The main title is "DataCite Fabrica" with the subtitle "Register and manage DOIs and metadata." Below this, a paragraph explains what Fabrica is and how to access it. It also mentions that Fabrica complements various APIs. On the right, there are three sections: "Repositories" (with a green icon of three dots), "Prefixes" (with a green icon of a tag), and "DOIs" (with a green icon of a document). Each section has a brief description.

DataCite Fabrica
Register and manage DOIs and metadata.

Fabrica is DataCite's web interface where you can create, find, connect and track all of your DOIs and metadata. Fabrica also includes all of the functionalities needed to manage repository accounts, prefixes and contacts.

To access this service you need to sign in with one of the following accounts: Member, Consortium, Consortium Organization, Repository. More information about how to use Fabrica is available [here](#).

Fabrica complements the [REST](#), [MDS](#), [OAI-PMH](#), and [GraphQL](#) APIs.

Repositories
Use Fabrica to manage your repositories.

Prefixes
Use Fabrica to manage your prefixes.

DOIs
Register and manage DOIs and their metadata through Fabrica.

Create DOI (File Upload)

More information about DOI registration via file upload can be found on our [Support Website](#).

* DOI A globally unique string that identifies the resource and can't be changed.
10.25316 k0bx-2766

Click the circle icon for a new random suffix, or the cross icon to delete the random suffix and enter a value manually.

* State The state determines whether a DOI is registered and findable. Once in Registered or Findable state, a DOI can't be set back to Draft. More ...
 Draft only visible in Fabrica, DOI can be deleted
 Registered registered with the DOI Resolver
 Findable registered with the DOI Resolver and indexed in DataCite Search

* URL The location of the landing page with more information about the resource.
URL

Should be a https URL – within the allowed domain(s) of your repository if domain restrictions are enabled in the repository settings. Https is supported. For example <http://example.org>

* Metadata Metadata that describe the resource.

csv-merger-1

Public

Select data from the dspace export file and merge into a new datacite
DOI import .csv

● Python

datacite-bulk-doi-creator

Public

Forked from [gsu-library/datacite-bulk-doi-creator](#)

A python script that bulk creates DataCite DOIs from a provided CSV
file. DOIs are created in the findable state.

● Python

csv-merger-2

Public

Merge the 'source' field from DataCite Bulk DOI Creator output with
your dspace export/import file

● Python

wxPython
